

UNLEASH POTENTIAL

Contract Management Solution

Challenge: The efficient and cost effective management of legal matters

Decision Inc. has developed a solution that engages multiple stakeholders in all stages of the automated and accelerated contract lifecycle. Now business users can author, review, approve, electronically sign and centrally store contracts generated by the organisation or by counter parties and track all documents and activities relating to a legal agreement.

Using the Microsoft SharePoint platform, a central repository is created where reduction of errors in the review and control process strengthens operational, contractual and regulatory compliance. Better contract management leads to process efficiencies with quicker turn-around time, which in turn leads to greater efficiency of resource-utilisation.

Key Benefits

Automated notifications: Managing contract deadlines and revisions

Secure: All contracts are stored in a limited access repository

Template driven: Generate contracts by completing forms linked to template metadata

Rapid Implementation: Roll out within two weeks
