

## Automated Compliance Solution

**Challenge:** Costly & inefficient management of contractor compliance

The mining industry sees thousands of contractors daily, each requiring periodic compliance checks, updated documentation and inspections. Ensuring compliance of these contractors is a costly and inefficient process as it is manually governed through spreadsheets and paper-based check list.

Decision Inc. has developed a solution which reduces the administrative burdens involved with maintaining contractor portfolios by means of automated review or approval workflows that connect directly to management. Standing time is reduced by compliance needs and the availability of key resources being managed in office or on mobile phones.

The solution offers seamless integration with ERP and T&A systems ensuring that contractors who do not adhere to compliance needs can be restricted from accessing areas of the mine and can even ensure that payments are withheld.

## Key Benefits:

**Improved visibility:** Live views of contractor compliance

**Automated documentation:** Automated acquisition of numerous certificates & documents

**Integration:** With processes and systems

**Collaboration:** Shares contractor details between operations

**Detailed recording:** Record site visits, interventions and pack audits
